

YUNUS EMRE EDIZER

Full-Stack Software Engineer (Candidate) — Backend, AI & Distributed Systems

Istanbul, Türkiye | +90 538 237 45 71 | edizeryunusemre@gmail.com | linkedin.com/in/edizeryunusemre | github.com/YunusEdizer

PROFESSIONAL SUMMARY

Software engineer specializing in the .NET Core / .NET 9, Next.js, and Python ecosystems, building scalable and secure systems from concept to live production. Metric-driven project experience across backend architecture (N-Tier, RESTful), machine-learning integration, quantitative finance, and computer vision. Experienced in corporate Agile/Scrum teams (Eurotech Bilişim A.Ş. & Weunique AI); proficient in TDD, Docker/CI-CD DevOps pipelines, and KVKK/GDPR compliance. 100% merit-scholarship engineering profile.

TECHNICAL SKILLS

Languages & Backend: C#, .NET Core / .NET 9, Python (Django, DRF, FastAPI, PyTorch), Node.js, Express.js, TypeScript, JavaScript, SQL, C/C++

Architecture & Methodology: N-Tier, MVC, Microservices, RESTful API, Distributed Systems, TDD, Agile/Scrum, Multimodal Fusion

Frontend & Mobile: Next.js 14 (App Router), React, Tailwind CSS, PWA, Flutter/Dart (BLOC), HTML5/CSS3 (ES6+)

AI & Data: Deep Learning (ShuffleNet V2, YOLOv8-cls, ResNet18), Computer Vision, Turkish NLP, XGBoost, SHAP/XAI, Genetic Algorithms

Database, DevOps & Security: PostgreSQL (JSONB), Supabase (RLS), MongoDB Atlas, Docker, Nginx, GitHub Actions (CI/CD), Azure, JWT, Bcrypt, KVKK/GDPR

EXPERIENCE

AI & Software Engineer (Project Developer) – Eurotech Bilişim A.Ş.

02/2025 – Present

- Drove machine-learning integration, data pipelines, and backend development across enterprise AI/software R&D projects at TRL6-readiness level.
- Coded pseudonymization, sensitive-text masking, and "right to be forgotten" API data-deletion endpoints for KVKK/GDPR compliance.
- Integrated R&D-stage ML models with FastAPI, PWA, JWT, and relational database (PostgreSQL/SQLite) layers into an end-to-end working system.

Software Engineer (Intern / Developer) – Weunique AI

09/2025 – 06/2026

- Built full-stack solutions in an Agile team, bridging data flow between an enterprise QC tool (Insight QC) and ERP/MES/SAP systems.
- Developed N-Tier backend services in the .NET ecosystem; applied Dapper and query optimization for high-performance operations.

SELECTED PROJECTS

MotorumBurada – Full-Stack Digital Marketplace (Live / Production)

Next.js, .NET Core, Supabase

- Built and shipped a digital marketplace (motorumburada.com) end-to-end, from Next.js/React frontend to .NET Core N-Tier RESTful API and Supabase database layers.
- Designed Row-Level Security (RLS) and data migrations on Supabase; resolved critical hydration/state bugs to improve performance and advanced the mobile app to store-release stage.

SmartScheduler – Genetic-Algorithm-Based Course Scheduler

ASP.NET Core 9, xUnit, Docker

- Designed and built a genetic-algorithm engine (chromosome/gene mutation, Tournament Selection) in C# to automate constraint-based course scheduling; added What-if analysis and PDF/Excel export (EPPlus).
- Wrote 64 tests (unit/integration/security/JWT) with a 100% pass rate using xUnit + WebApplicationFactory; set up a Docker + GitHub Actions CI pipeline.

BIST-PairTrader – Statistical Arbitrage & Cointegration Engine

Python

- Developed a pair-selection model chaining Pearson correlation (≥ 0.75) and Engle-Granger cointegration ($p \leq 0.05$) tests in a 3-stage pipeline.
- Built an event-driven backtest engine generating Z-score (± 2.0) signals from OLS hedge ratios, including commission/slippage; integrated a risk layer with Half-Kelly sizing and 95% VaR.

BIST-HI – XGBoost-Powered Hybrid Investment Intelligence Platform

Python, Streamlit

- Developed a decision-support system scoring BIST100 stocks 0-100 by combining fundamental/technical indicators (P/E, ROE, RSI, MACD) with XGBoost return probabilities; built a Streamlit interface using SHAP (XAI) to surface the features driving each score.

DevMonitor – Distributed Hardware & Performance Monitoring Infrastructure

Django/DRF, PostgreSQL

- Developed the backend of a central monitoring engine processing system resources (CPU, RAM, Disk I/O, top 10 processes) every 15 seconds and detecting anomalies.
- Optimized live tracking with an $O(1)$ 24-hour sliding-window algorithm on PostgreSQL JSONB to prevent database locks under high-frequency load; packaged agents as Windows/Linux/macOS services.

Psychiatry AI – Multimodal Clinical Decision-Support Platform (TRL6, Eurotech)

PyTorch, PWA

- Designed a deep-learning pipeline fusing image (AU), audio (MFCC), Turkish NLP, and wearable-sensor data in an attention-based fusion layer; developed the SHAP/XAI decision engine (decision/engine.py).
- Built a PWA-based clinical panel with live microphone-recording processing, case-severity scoring, and reporting for clinicians.

DeepPark – Parking Occupancy Detection (Deep Learning)

PyTorch

- Trained and tested ShuffleNet V2 and YOLOv8-cls architectures on the PKLot dataset (32,327 images); applied data augmentation (ColorJitter, RandomRotation) and 5-Fold Cross Validation.

EDUCATION

B.Sc. Software Engineering

Istanbul Topkapı University · 2023 – 2027 (expected)

- ÖSYM Placement Scholarship (100%) · GPA: 2.89 / 4.00

LANGUAGES

- Turkish — Native
- English — Professional Working Proficiency
